

Mathematical Process Standards

3.1 Mathematical process standards. The student uses mathematical processes to acquire and demonstrate mathematical understanding.

Tools to Know			Ways to Show			
3.1(A)	3.1(B)	3.1(C)	3.1(D)	3.1(E)	3.1(F)	3.1(G)
apply mathematics to problems arising in everyday life, society, and the workplace	use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution	select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems	communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate	create and use representations to organize, record, and communicate mathematical ideas	analyze mathematical relationships to connect and communicate mathematical ideas	display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication

Knowledge and Skills Statements

3.2	Number and operations. The student applies mathematical process standards to represent and compare whole numbers and understand relationships related to place value.
3.3	Number and operations. The student applies mathematical process standards to represent and explain fractional units.
3.4	Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations in order to solve problems with efficiency and accuracy.
3.5	Algebraic reasoning. The student applies mathematical process standards to analyze and create patterns and relationships.
3.6	Geometry and measurement. The student applies mathematical process standards to analyze attributes of two-dimensional geometric figures to develop generalizations about their properties.
3.7	Geometry and measurement. The student applies mathematical process standards to select appropriate units, strategies, and tools to solve problems involving customary and metric measurement.
3.8	Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data.
3.9	Personal financial literacy. The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security.

2 Computations and Algebraic Relationships	18	3.4(A) solve with fluency one-step and two-step problems involving addition and subtraction within 1,000 using strategies based on place value, properties of operations, and the relationship between addition and subtraction 3.4(K) solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects; pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts 3.5(A) represent one- and two-step problems involving addition and subtraction of whole numbers to 1,000 using pictorial models, number lines, and equations 3.5(B) represent and solve one- and two-step multiplication and division problems within 100 using arrays, strip diagrams, and equations 3.5(E) represent real-world relationships using number pairs in a table and verbal descriptions	3.4(B) round to the nearest 10 or 100 or use compatible numbers to estimate solutions to addition and subtraction problems 3.4(D) determine the total number of objects when equally sized groups of objects are combined or arranged in arrays up to 10 by 10 3.4(E) represent multiplication facts by using a variety of approaches such as repeated addition, equal-sized groups, arrays, area models, equal jumps on a number line, and skip counting 3.4(F) recall facts to multiply up to 10 by 10 with automaticity and recall the corresponding division facts 3.4(G) use strategies and algorithms, including the standard algorithm, to multiply a two-digit number by a one-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties 3.4(H) determine the number of objects in each group when a set of objects is partitioned into equal shares or a set of objects is shared equally 3.4(J) determine a quotient using the relationship between multiplication and division 3.5(C) describe a multiplication expression as a comparison such as 3×24 represents 3 times as much as 24 3.5(D) determine the unknown whole number in a multiplication or division equation relating three whole numbers when the unknown is either a missing factor or product
3 Geometry and Measurement	10	3.6(A) classify and sort two- and three-dimensional figures, including cones, cylinders, spheres, triangular and rectangular prisms, and cubes, based on attributes using formal geometric language 3.6(C) determine the area of rectangles with whole number side lengths in problems using multiplication related to the number of rows times the number of unit squares in each row 3.7(B) determine the perimeter of a polygon or a missing length when given perimeter and remaining side lengths in problems	3.6(B) use attributes to recognize rhombuses, parallelograms, trapezoids, rectangles, and squares as examples of quadrilaterals and draw examples of quadrilaterals that do not belong to any of these subcategories 3.6(D) decompose composite figures formed by rectangles into non-overlapping rectangles to determine the area of the original figure using the additive property of area 3.6(E) decompose two congruent two-dimensional figures into parts with equal areas and express the area of each part as a unit fraction of the whole and recognize that equal shares of identical wholes need not have the same shape 3.7(C) determine the solutions to problems involving addition and subtraction of time intervals in minutes using pictorial models or tools such as a 15-minute event plus a 30-minute event equals 45 minutes 3.7(D) determine when it is appropriate to use measurements of liquid volume (capacity) or weight 3.7(E) determine liquid volume (capacity) or weight using appropriate units and tools
4 Data Analysis and Personal Financial Literacy	6	3.8(A) summarize a data set with multiple categories using a frequency table, dot plot, pictograph, or bar graph with scaled intervals	3.4(C) determine the value of a collection of coins and bills 3.8(B) solve one- and two-step problems using categorical data represented with a frequency table, dot plot, pictograph, or bar graph with scaled intervals 3.9(A) explain the connection between human capital/labor and income 3.9(B) describe the relationship between the availability or scarcity of resources and how that impacts cost 3.9(D) explain that credit is used when wants or needs exceed the ability to pay and that it is the borrower's responsibility to pay it back to the lender, usually with interest 3.9(E) list reasons to save and explain the benefit of a savings plan, including for college
		<i>SEs Not Included in Assessed Curriculum:</i>	3.9(C) identify the costs and benefits of planned and unplanned spending decisions 3.9(F) identify decisions involving income, spending, saving credit and charitable givings
# Items	46 (3 Griddable)	28-30 questions from Readiness Standards	16-18 questions from Supporting Standards
